In general, there are two types of AMTs: integrated AMTs and additional AMTs. AMTs are designed to be dedicated AMTs, while additional AMTs are standard manual transmission conversions to AMT. An automated manual may include a mode automatic transmission where the driver does not have to change gears.[24] These transmissions can be defined as a standard manual transmission with automatic clutch and automatic transmission control, which allows them to function as the traditional automatic gearboxes. Currently DTM uses a 6-speed Hewland DTT-200 sequential transmission with steering wheel-mounted gearboxes, introduced for the 2012 season with the new rule change. Woodyard, Chris. May 1976: 67A-73.
